Before the science, technology and innovation policy

In clarity that the policy of science, technology and innovation is, on the one hand, one of the main guidelines developed by the national government for the 2014-2018 period, and on the other hand, part of the strategy of Strategic Competitiveness and Infrastructure for the period 2016-2025, to which is added the Colombian historical experience of being in the frame of action of post Agreements of Havana, the Criteria Libre Jurídico Magazine is compelled to join the efforts from the framework of academic and investigative action of the Faculty of Right of Universidad Libre Seccional Cali to contribute to the visibility of research results as a missionary principle that responds to the demands of the country's bets in order to respond to the specific challenges of the territories in cooperation with the agents of the national system of innovation.

Although to achieve high rates of visibility, the editorial policy of the Free Criteria journal should be rigorous in following the guidelines required by Publindex, it finds, beyond the reach of measurement indicators, an opportunity to be decidedly a contribution to the dissemination of results of inquiries carried out by national and international researchers. Several steps have already been taken from the route to follow, and this is what the authors identify who have seen in our editorial the propitious setting for their publications. What remains to be removed brings great challenges.

Every time that the universities turn their eyes towards the policy of Colombian CTeI, they try to attend it with the rigor that their budgetary possibilities allow them, which means to tend for a pertinent bet of the investigation in the regions, at the same time as the actions advanced by the Teachers researchers also join the path of institutional accreditation, certification and recertification of programs. The policy of CTeI is transversal to the requirements for the academic offer and the recognition of quality in the accreditation; both the one and the other, has among its indicators the publications.

Being the Criterio Libre Jurídico Magazine a scientific publication scenario in the areas of Law, Political and Social Sciences, it has its virtual publication in the Open Journal System -OJS software, under the guidelines of Publindex, adding to this the open visibility of inquiries of the researchers and what that implies in an opportunity for their indicators as a researcher and author of publications, as well as the strengthening of the institutions to which the researchers are formally linked. The challenge is to position the editorial rigor of the Criterio Libre Jurídico Magazine visible in the National Service of Indexing of Serial Specialized Publications of Science, Technology and Innovation - Publindex, thereby irradiating the academic communities that have decided to publish with us.

We are all then called to know the one and multiple ways of reading the world from the perspective of law, political and social sciences, as research results, adding to this reflection exercises for future new publications.
