

## EDITORIAL

The attitude towards research is one of the few remarkable and different aspects between poor, underdeveloped developed and rich countries. This is so true that there is presently a great agreement to highlight the role of research for countries economic growth and sustainable development.

As a country, we are to do much to foster cultural and economic conditions to make research a strong pillar to face the future challenges by means of learning processes to foster critical thinking and creativity capacity however, among us no body refuses to develop their critical thinking capacity and creativity as we learn new things during time.

At Libre University research is a systematic and permanent activity for production, transformation and application of new knowledge linked to the formation processes to stregethen new technologies in the educational realm. From this view, the study of social, economic and environment issues in the university realm makes research a bridge to close the gap between the academic world and the communities. In this sense, the research culture at Libre University has been a common room where the academic community progress towards the construction of an autonomous, critical creative thought whose pluralistic character show respect for what is different.

The budget the university grants the (PIDI) (Institutional Development Integral Project) shows how important research is for this University philosophy. Two of the projects in the University Strategic Plan are to stregethen the scientific and formative research and foster the academic and scientific production. The Number 11 project is aimed at strenghtening scientific and formative research in the National, regional and local university sites to assure its operability, functionability and an outstanding place in the research realm in the international, national and local settings.

The second project (Proyecto No. 12), seeks to increase the high quality intellectual and scientific production by teachers, researchers and students to socialize and view the research results. According to this, the University seeks high quality standards of the social component as well as academic and research papers by having them published either in the magazine university or other magazine universities. Number 12 project allows Libre University to issue its academic production which must have as prerequisites its editorial and scientific member committee high quality qualification and the assessors´ suitability responsible for ensuring the published articles results validity and reliability

# SABER, CIENCIA Y Libertad

---

As in the previous issues, the current one embraces a wide range of topics of social, economic, and law which deals vary topics that shows the authors' greater concerns about Colombia country and the rest of the world.

For example, from the law realm this issue has some important insights about the Postconflict legal framework, The worker's criminal protection and the relationship between mining and the indigenous population human rights defense.

From the economic realm, this issue also offers some proposals around the economic growth chances and the Colombian regions sustainability from innovation and entrepreneurship by analyzing the health enterprises efficiency and productivity within the latin American context together with the applicability of RSC in Jordanian.

Finally, in the education realm (pedagogy and sociology) the articles show the University social impact, the roles the current world demands from human sciences and the teachers' research activity.

Also, we hope that the issue of this *magazine Saber, Ciencia y Libertad* is the opportunity for new insights and these are offered to the researchers in Colombia and Latin America as an Invitation to continue to build a fairer and better world for everybody.
