

## EDITORIAL

Michelle Andrea Nathalie Calderón-Ortega

Academia & Derecho brings its readers articles on a wide range of topics, reflecting the concerns and debates of our time, subject to analysis, review, and validation by peers and experts. With each new issue, readers are provided with works of excellent scientific and academic quality, the result of the dedication and diligence of authors and co-authors, as well as the careful review by external referee committee members and those serving as editors or members of the editorial committee, contributing their knowledge and expertise to every step of the process.

In a world of constant evolution, where science, technology, and innovation play a fundamental role in the development of society, it is imperative to recognize the essential role that scientific publications play in promoting knowledge and advancing humanity. In this context, Academia & Derecho stands as a beacon of knowledge, illuminating the path toward a more informed and ethical future.

Scientific publications are a fundamental pillar for the growth of science, technology, and innovation. They are the means through which researchers, scholars, and scientists share their discoveries, theories, and advances with the global community. Each article, each study, each analysis carries the potential to inspire new research, generate solutions to contemporary problems, and promote progress in various disciplines.

In an increasingly interconnected world, scientific publications have the responsibility of disseminating the advances of science to different generations and communities. This is particularly relevant in the context of social sciences and law. In a time when technology is advancing rapidly, social sciences and law play a crucial role in the ethical and legal regulation of these advancements.

Technology, from artificial intelligence to biotechnology, presents unprecedented ethical, legal, and social challenges. How can we protect privacy in the information age? How do we ensure equity in access to new technologies? How can we regulate artificial intelligence fairly and safely? These are just some of the questions that require the attention and expertise of social science and law experts.

Today, more than ever, it is essential to recognize the value of social sciences and law as critical counterparts to technological innovation. These disciplines not only provide ethical and legal frameworks but also analyze the social implications of technology, helping to shape a more equitable and sustainable future.

Academia & Derecho takes pride in serving as a vehicle for the dissemination of knowledge in these crucial areas. We invite our readers to continue consulting our publications and to replicate their content in various scientific and academic settings. It is through collaboration, debate, and ongoing research that we can address the challenges of the present and build a future where science, technology, and law come together to create a better world.

Thus, scientific publications are an essential component of human progress. Today, more than ever, we must recognize the value of social sciences and law in the era of technological innovation. Academia & Derecho is committed to continuing to be a beacon of knowledge in these fields and urges you to join us in the pursuit of understanding and solving the challenges we face as a society.

In light of the above reflection, we present the 26th edition of Academia & Derecho - RA&D, covering the period from January to June 2023, with the confidence that the articles it contains will provide a critical discussion with solid foundations in each of their respective areas.

Finally, we remind our future contributors and authors that all articles submitted to our journal must adhere to the author guidelines, which can be found at the following link:[https://revistas.unilibre.edu.co/index.php/academia/directrices\\_autores](https://revistas.unilibre.edu.co/index.php/academia/directrices_autores)
