

EDITORIAL

Research is an activity, which is inherent to mankind, it has granted us survival since ancient times. On their urge to discover, men and women from different eras and cultures have implemented research to solve their inquiries regarding their surroundings, usually with the purpose of contributing to a better world. In this way, we move forward by giving explanations to events, that our ancestors would explain by attributing them to magical powers from supernatural beings, and by using a methodology. Nevertheless, in order to advance in scientific research processes, a bigger step is required: in order to acquire this kind of knowledge we need a systematic, organized and verifiable process, led by a researcher on his urge to make science.

As scientists we have a challenge to transmit to the local, national and international community the advances and results of our research. If knowledge is not published, it is tantamount to non-existing. In this sense, the publishing of articles through digital journals allows to visualize the scientific production beyond the national frontiers. It is precisely because of the immediacy and the easy distribution why Internet has become an important factor in the current academic realm. The diffusion of the scientific production through this tool allows, like never before, other researchers on this planet to advance on the development of their work, granting in this way the continuance of science. In this way, publishing becomes the link between the researcher and the scientific community.

This is why publishing results of rigorous researches contributes to the collective construction of knowledge, and at the same time, it allows our college to fulfill our commitment of promoting research in all the disciplines of knowledge.

In this way, with the intention of guaranteeing a greater diffusion of the research work of our authors, we actively made an incursion in the digital world, with the confidence that the published articles on this issue will contribute to the construction of new knowledge and, unquestionably, a better life.
