

## EDITORIAL

Contemporary society faces the consequences of social changes experienced in recent decades. Factors such as globalization, development of information technology and communication, climate change, among others, are facts that are defining the occurrence and development of societies; the destruction of ecosystems, the widespread increase in corruption, are presented as common denominator worldwide; therefore change the current development process, under the address of professionals concerned with the conservation of resources, ensuring sustainability must be decisive for humanity.

Against this background the education system can not be treated in isolation as education as key to development and progress of countries should regard to the formation of competent citizens in order to contribute to the sustainability of their environment; Well it confirms the statement by the Organization for Economic Cooperation and Development (OECD) “investment in public education generates yields that result in higher levels of tax collection, increased contributions to social security and decreased transfers as well and social benefits, as there are clear links between higher education and better health, social cohesion and citizen participation, among others (OECD, 2011).

Thus, it is seen as the work of universities inferred in all sectors of society, so that their role substantive teaching, research, outreach, should be framed within a socially responsible behavior that responds to fulfill its mission .

From this perspective, the University of the century, and in the particular case, the Free University, Cartagena school must respond to multiple demands, which from research is approached from the Social Knowledge Management, through research addressed by attached to the Administrative Department of Science, Technology and Innovation Colciencias Groups Your commitment is a comprehensive and relevant training, oriented to their professional futures are leaders and solve problems they encounter with social responsibility and respect for their environment; committed to the defense of justice, whose actions are based on ethical founding principles of freedom, equality and tolerance, which is reflected in their research projects; thus confident that the knowledge generated, involving resolve the problems and needs of the region guaranteeing its sustainability.

In this issue of the Journal Saber Science and Freedom, is shared with the results research community characterized by its quality and diversity, which is made explicit our commitment to the enrichment of the various disciplines that make up our Alma Mater, framed in our principles . In it there are partnerships whose contents include areas of Constitutional Law, Human Rights, Corporate Responsibility and Corporate, Business and Society; and, Pedagogy and Sociology of Education, treated with the utmost scientific rigor.

# SABER, CIENCIA Y Libertad
